October 2016

School Staffing Costs:

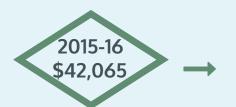

From the BEP formula to paying teachers in the classroom

State Decisions:

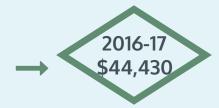

the BEP formula and funding requirements

Salary
Unit Cost
Increases
Are Set
By Law

The BEP formula uses a single dollar figure as the "unit cost" for calculating salary costs for all instructional positions, such as teachers, principals, and others. This salary unit cost figure is set each year in the appropriations bill. Salaries and benefits for instructional staff have comprised the largest of the three categories of BEP allocations, at 56 percent. In 2016, the law changed, separating salaries/wages from benefits when calculating BEP allocations.

The General Assembly approved the Governor's requested \$2,365 increase in the salary unit cost.

BEP
Allocations
Require State
And Local
Funding

The BEP allocations generated by the formula are funded in two parts: a state share and a local matching contribution from county or city governments. The local share varies based on each county's ability to raise revenues, or its fiscal capacity. When salary unit cost is increased, the BEP allocation, or pot, for instructional funding increases. A bigger pot needs more revenue to fill it.

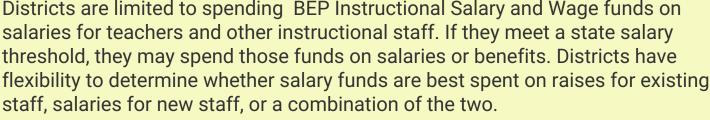

When the General Assembly votes to increase the BEP pot, it appropriates additional state funds to fill its share of the pot.

More state funds in a bigger pot triggers an increase in required local matching funds. The local funding bodies that would not meet their local match requirements after a BEP increase must appropriate additional funds for education to fill their share of the pot. Most districts, however, already exceed their matching share and thus are not mandated to seek additional local funding.

Local Decisions: BEP spending plus any additional funding

Districts Can
Spend
Instructional
Funds on
Raises or
New Staff

Most districts hire more staff than the number of positions the BEP formula calculates for their enrollment size. And most districts pay salaries that total more than the BEP formula generates with its salary unit cost figure. Districts use additional local funds, beyond the required local match, to fund these extra staff expenses.
